

Environnemental Chart AIR COST CONTROL

2023-2026

Air Cost Control, through its activities, has implemented an environmental policy and is committed to minimizing its environmental impact.

Convinced of the economic benefits of such an approach, A2C wants to prove through its experience that an ecologically responsible attitude is compatible with the healthy growth of a company.

For this reason, we have drawn up an environmental charter that we are dedicated to upholding every day. The chart aims to demonstrate that by giving priority to environmental responsibility, a company can strengthen its long-term financial stability, enhance its reputation and unite all stakeholders - employees, customers and suppliers - around a common vision.

The development and implementation of this chart represents the commitment of Air Cost Control's management, it represents the willingness to comply with regulations and other requirements. It remains a responsibility shared with employees.

The Quality/Environment department implements an action plan to facilitate the actions follow-up defined by this chart.

The Q/E department is responsible for :

- Ensure compliance with the charter ;
- Evaluate and update modifications to the initial chart and EMS documents ;
- Perform Environmental audits ;
- Draw-up an annual activity report and monitor the KPI
